

SALSA Field Report: 10 Dec 2018. Compiled by Matt Siegfried.

SALSA Geophysics/SALSA EM, Location: Whillans Subglacial Lake

- Weather today started out shaky with winds picking up in the morning, blowing a bit of snow through our nascent camp. Weather improved slowly through the day, ending with a beautiful, windless evening. Perfect weather to set up and organize a camp!
- The team spent the day moving cargo around, organizing, and melting snow to top up our water stores.
- We go to sleep tonight with a camp ready to start work. Tomorrow, weather permitting, we will open our science operations at SLW installing as many MT stations as the day allows.

A new camp, without the six-foot tall drifts we had to deal with at our last camp.
