

SALSA Field Report: 2 Dec 2018. Compiled by Matt Siegfried.

SALSA Geophysics/SALSA EM, Location: Camp 20

- With elevated winds over the past day, we couldn't move any of the stations we installed yesterday, so we did more cleaning of the longitudinal line. We dug up the three remaining stations on the along-flow line, reinstalled two of them on our cross-flow line, and put fresh batteries on three other stations.
- The cross-flow line only needs one more station installed until it's fully occupied. We plan on installing this station (only 5 km from camp) tomorrow after a well deserved morning off to celebrate two weeks in the field. We also will put fresh batteries on all the stations and fix a bad magnetometer channel at one station while we wait for a window with low winds to collect low-noise observations.

Chloe updates the big map with our day's progress at our evening meeting.
